

SECRETARY'S RECORD, NEBRASKA PUBLIC SERVICE COMMISSION

BEFORE THE NEBRASKA PUBLIC SERVICE COMMISSION

In the Matter of the Commission,) Application No. 911-007
on its own motion, to provide)
for and fund intertandem) ORDER
trunking across the State of)
Nebraska for use in provision of)
wireless enhanced 911 service.) Entered: October 28, 2003

BY THE COMMISSION:

The Commission has been responsible for the administration of the Wireless E911 Fund since passage of the Wireless Enhanced 911 Services Act in 2001 Session of the Nebraska Legislature. The Commission and its staff have been actively assisting public safety answering points (PSAPs) and wireless carriers with implementation of wireless E911. In its role as facilitator among PSAPs, local exchange carriers, and wireless carriers, the Commission has become aware of a need to transfer Phase I E911 wireless calls among different PSAPs.

Due to the mobile nature of wireless phones, a call to 911 is sometimes routed to the wrong PSAP. A call from a cell phone could transmit through a carrier's cell tower and be transferred to a PSAP that is not actually the closest PSAP to the caller. While wireless carriers have made efforts to minimize the occurrence of such a scenario, a need still exists for PSAPs to be able to transfer a wireless call to a PSAP that is able to more quickly direct emergency services to the caller.

Currently, a PSAP in Nebraska can transfer wireless 911 calls to another PSAP, but only the voice is transferred. With Phase I wireless enhanced 911, the PSAP receiving a 911 call receives a call-back number and cell site information. Without intertandem trunking, the call-back number and cell site information cannot be transferred to another PSAP. Transfer of such Phase I information is crucial in locating the person making the 911 call.

O P I N I O N A N D F I N D I N G S

In the interest of carrying out the intent and purposes of the Enhanced Wireless 911 Services Act (Act), the Commission finds that it should fund intertandem trunking across the state. The Act provides in part, "The commission shall have any powers necessary to carry out the intent and purposes of the act."¹

¹ Neb. Rev. Stat. § 86-465(3) (Reissue 2002).

SECRETARY'S RECORD, NEBRASKA PUBLIC SERVICE COMMISSION

Application No. 911-007

Page 2

Furthermore, "The commission shall determine the most efficient method for providing enhanced wireless 911 service."²

The Commission proposes to connect tandems in two stages. The first stage would connect the Qwest tandems of Norfolk, Grand Island; Sioux City, Iowa; and Des Moines, Iowa. The second stage would connect ALLTEL's Lincoln tandem and Sprint's Scottsbluff tandem to the network of tandems described in the first stage. A greater number of PSAPs served by Qwest Corporation (Qwest) have implemented Phase I wireless E911, thus the first stage would be connecting Qwest's tandems. Connecting the tandems of ALLTEL and Sprint would be more cost effective at a later date, as there are currently not enough PSAPs with Phase I E911 in either carrier's service area.

The total costs of providing intertandem trunking for the two stages described above are \$790,074.91. These costs are itemized in Exhibit 1 to this order. Qwest would perform all the work necessary to connect the tandems, and a description of Qwest's proposal is attached as Exhibit 2. Costs would be paid by the Wireless Enhanced 911 Fund.

O R D E R

IT IS THEREFORE ORDERED by the Nebraska Public Service Commission that the Commission staff pursue construction of intertandem trunking across the state as described in this order.

IT IS FURTHER ORDERED that upon invoice from Qwest, costs of intertandem trunking that comport with this order shall be paid by the Wireless Enhanced 911 Fund.

² Neb. Rev. Stat. § 86-464 (Reissue 2002).

INTERTANDEM TRUNKING AND SS7 NETWORKS

10/16/03

4Q03 Project

Intertandem trunking Council Bluffs to Des Moines	\$ 175,796.44
Intertandem trunking Sioux City to Council Bluffs	\$ 259,137.52
Intertandem trunking Grand Island to Council Bluffs	\$ 168,434.42
Intertandem trunking Norfolk to Council Bluffs	\$ 44,682.46
Project Management	\$ 24,600.00

1Q04 Project

Council Bluffs SS7 Upgrade	\$ 8,889.98
Grand Island SS7 Upgrade	\$ 17,766.49
Norfolk SS7 Upgrade	\$ 3,499.15
Sioux City SS7 Upgrade	\$ 452.61
Project Management	\$ 1,200.00

4Q04 Project

Intertandem trunking ScottsBluffs to Grand Island	\$ 64,163.45
Intertandem trunking Lincoln to Council Bluffs	\$ 17,252.39
Project Management	\$ 4,200.00

Total Projects \$ 790,074.91

Executive Summary:

Qwest Communications is the current provider of the Basic and Enhanced 911 service in the State of Nebraska. Qwest would like to propose to the State of Nebraska a digital 911 network that will allow for the migration to new digital interfaces. The solution we have developed is the vehicle for the integration of a statewide 9-1-1 call delivery system. In the Qwest LEC region this integration has been completed in Arizona, Colorado, Oregon, Minnesota, North Dakota and Washington. This solution provides:

- A reduction of call delivery times from 6-8 seconds to 1-3 seconds.
- Meets FCC J-standard compliance for Phase II signaling between wireless carrier central office and the Qwest 911 Selective Router.
- Provide the ability to transfer 9-1-1 calls between all PSAPs in the State of Nebraska. With the huge deployment of wireless services, the need for PSAPs to transfer 9-1-1 calls over wide geographic areas is becoming a necessity.
- Expand the ability for a PSAP to receive the full ten digit telephone number of callers resolving LNP issues.

Plan Objective:

The objective of this plan is to deploy a digital solution and intertandem trunking for the E911 network in the state of Nebraska. The scope of this deployment includes the following enhancements to the E911 network.

- Deployment of software features in the Selective Routers to provide Tandem to Tandem transfer.
- Create a network HUB in Council Bluffs Selective Router connected to Selective Routers in Des Moines, Sioux City, Norfolk, Grand Island as well as non-Qwest Selective Routers in Lincoln and Scottsbluff.
- Provide inter-Tandem trunking and call routing between the E911 Selective Routers
- Converting the existing ES (Emergency Service) E911 end office trunks from MF (Multi-Frequency) to SS7 (Signaling System 7) increasing call set-up time and enabling 10-digit dialing which includes
 - Redesign and re-programming of all current 911 trunk groups to the existing E911 network. Includes hardware change-outs at various central offices as well as coordination with CLEC and Independents.

Project Overview:

A. Product/Service Description

Deployment of these enhancements will provision the State of Nebraska for:

- 1) Condition the selective routers to allow the transfer of E911 calls between the tandems serving Nebraska.
- 2) Convert the ES E911 trunks from MF to SS7 to expedite transfer of calls between the selective routers, improve customer satisfaction by reducing call set-up time and digitizing the network for compatibility with future technologies.
- 3) SS7 A-link diversity.
- 4) Condition Council Bluffs tandem as the network HUB between all selective routers in the state for tandem to tandem transfer.

B. Technical Overview

Software requirements

NPA to NPD Translation Table for E911 Calls

This feature allows for 10-digit routing of E911 calls throughout network. NPA to NPD translation feature is required to service multiple NPAs that may be required in the future within the Nebraska 911 service area.

Inter-Tandem Enhancement

This is required for the selective routers to allow transfer of calls between the selective routers.

Intertandem trunking

Four new switch terminations (trunks) are required in each of the Qwest selective routers to provision the transfer group.

ES Trunk Conversions (MF to SS7)

ES trunks between the end offices and the associated selective routers, switch and IOF terminations must be modified to accommodate the SS7 technology. Switch Translations must rebuild the SS7 trunks between the selective router and the end offices.

- 1) ES trunks in central offices that do not have A-link diversity will remain MF where MF trunks offer better diversity than SS7. A-Links connect an end office or signal point to a mated pair of Signal Transfer Points. Two-way path diversity is recommended so that one common disaster does not isolate a signal point or end office from the rest of the network.
- 2) Emergency Transfer Backup (ETB) trunks within the E911 network will remain MF.

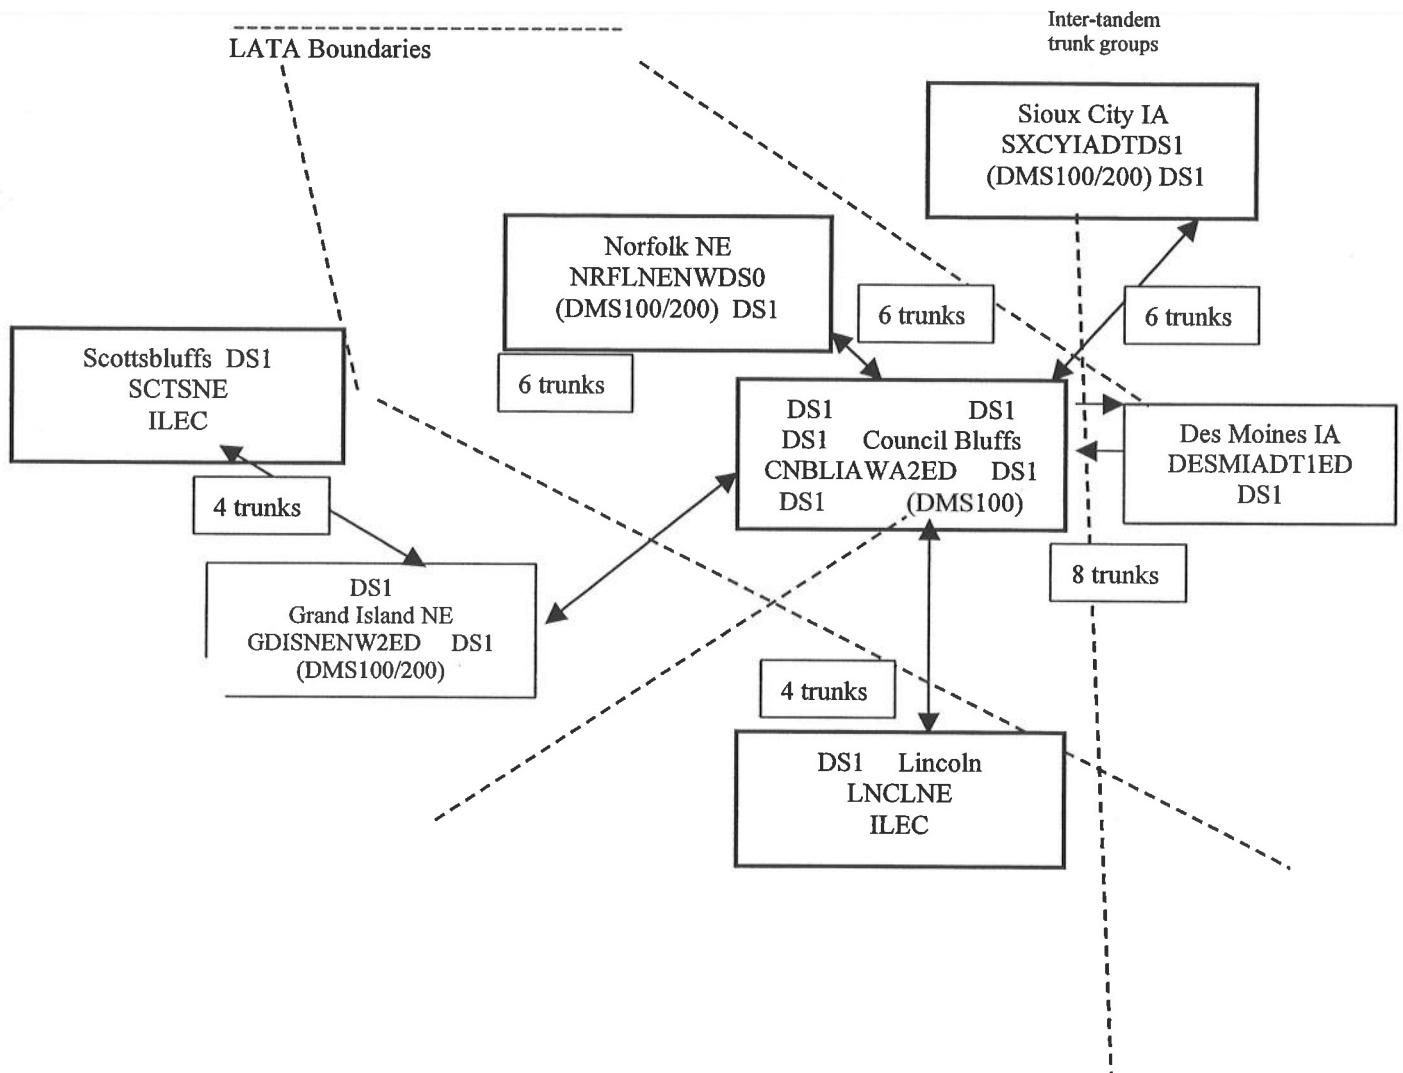

ILEC and CLEC trunk SS7 conversion must be at their request to Qwest. A letter go out to all the ILEC and CLEC communities requesting that they convert if possible or notify the PSAPs in Nebraska if they are unable to do so. Qwest will coordinate conversion when requested by the ILEC/CLEC.

C. Service Delivery Coordination:

A Qwest team will be assigned to design and implement the network elements as well as coordinate scheduling with PSAPs, ILEC/CLEC and the various Qwest organizations responsible for installation of a project of this magnitude.

Weekly status calls, project timeline tracking and escalation processes are all managed through this team.
